ESLS Brussels

WELCOME TO BRUSSELS

Brussels is over one thousand years old and the capital of Belgium and Europe. Additionally, it is the seat of its federal government, and headquarters of the EEC, NATO, EURATOM, as well as other significant office bodies. Each year, this influential city hosts over 16,000 business symposia.

Well known for its fine food, chocolates, beers, and gentle population, Brussels offers a multilingual society while providing a great variety of housing and outdoors recreation possibilities. Visitors from all over the world are openly welcome and encouraged to experience the exciting and unique city of Brussels.

G. Dapri

Dear Colleagues,

The School of Laparoscopic Surgery at the Saint-Pierre University Hospital exists for more than 18 years and is one of the oldest and the most important Schools of laparoscopic surgery in Europe. The very best experts of the world have come to teach and since its beginning over 5000 fellows and surgeons have followed the courses.

For years, these courses are endorsed by the Society of American Gastrointestinal and Endoscopic Surgeons (SAGES) and by the European Association for Endoscopic Surgery (EAES).

The courses are also transmitted at distance in University Centers around the world including Third World countries.

This year all the workshops aim to offer the laparoscopic surgeon all the details (tricks and pitfalls) needed in performing advanced laparoscopic procedures. This form of teaching is based on live procedures performed by expert surgeons (highly qualified individuals with technical and teaching expertise). Opportunities to interact with the operative surgeons are provided directly in the operation room. International experts moderate the live surgical procedures either on-site or by video conferencing.

Every subject is classically approached by 4 steps :

- Laparoscopic anatomy by virtual reality
- Illustration of the procedure's principle
- Live demonstrations
- Discussion on technical details than can be reviewed on DVD

We stress on the technical details, on imaging and on interacting as much as possible.

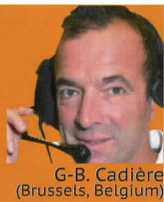

We welcome you in Brussels and wish you a happy and fruitful stay with us.

GENERAL COURSE

BRUSSELS November 17-20

Auditoire Bastenie – Forum
CHU St Pierre
322 Rue Haute - Brussels

COURSE DESCRIPTION:

How can a surgeon expand his/her field of indications in laparoscopy?

During three sessions, two in the spring and one in the autumn, the following themes are developed:

- Foregut surgery
- Colorectal surgery
- Inguinal and ventral hernia repair
- Solid organs - New technologies

Two identical procedures are performed by two different surgeons.

Both procedures are displayed on different screens at the same time.

Comments and interactions with both surgeons are realized simultaneously.

OBJECTIVES:

- To show common advanced procedures in their newest development
- To show tricks and pitfalls
- To indicate operative strategies and their anatomical base
- To allow intensive interaction between surgeons, experts and the audience
- To compare in parallel two techniques of the same procedure by two different experts

P.M.	LIVE	SINGLE-ACCESS TRANSUMBILICAL CHOLECYSTECTOMY
	LIVE	CHOLECYSTECTOMY BY NEEDLE
15:00		Conference :
		• Computer Science and Image-Guided Surgery: Inventing the Future
		HANDING OUT OF CERTIFICATES OF ATTENDANCE

BARIATRIC SURGERY

COURSE DESCRIPTION:

Bariatric surgery has caused a new boom in the field of laparoscopic indications. Is the approach justified ? Are all patients candidates ? Which operation must be chosen ? Participants will understand the several laparoscopic approaches of bariatric surgery, having the opportunity to view different live cases in the operating room : gastric bypass, sleeve gastrectomy, duodenal switch, and biliopancreatic diversion. Two courses will be only developed on reoperations (redo) for failed or complicated procedures.

COURSE OBJECTIVES:

- Review common guidelines in bariatric surgery
- Show different procedures, tailored to the patients' needs
- Show techniques and strategies to reduce operative time and postoperative complications
- Comment on tricks and pitfalls in the different procedures
- to provide escape routes in case of peroperative mishaps
- Choose a new bariatric procedure in case of failed or complicated previous surgery
- Manage early and late postoperative complications

COURSE CHAIRS:

G-B. Cadière
G. Dapri

March 12

April 2

June 18

September 23

November 26

TRANSORAL FOREGUT SURGERY (TOFS)

COURSE DESCRIPTION:

Recent developments in endoluminal and transluminal procedures suggest that, in the near future, general surgeons will need to be well grounded in flexible endoscopy. This course gives the possibility to have an endoscopic approach to the pathology of the upper gastrointestinal tract : gastroesophageal reflux disease, bariatric surgery and early gastric cancer.

OBJECTIVES:

- To describe the technique to treat the GERD by endoluminal fundoplication (EsophyX)
- To practice an endoscopic suture
- To show the benefits and results of this new approach

COURSE CHAIRS:

G-B. Cadière
J. Himpens
J. Devière
A. Rajan
N. Van Sante

October 15

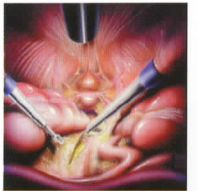

COLORECTAL SURGERY

COURSE DESCRIPTION:

This two-day session tackles a number of questions and issues, including whether laparoscopic colectomy should be performed in all cancer patients, and what to do in the case of total mesorectal excision (TME). The course also addresses the question of whether or not trocar site recurrences are a myth, and what the approach for a benign disease should be. Participants observe live left hemicolectomy, right hemicolectomy and TME being carried out.

COURSE OBJECTIVES:

- Review the anatomy of the region in the context of a laparoscopic approach.
- Give general strategies for laparoscopic colorectal surgery.
- Teach best practices and avoidance of pitfalls in the various procedures.
- Explain potential long-term functional problems and how to avoid them to explore the holy plan of Bill Heald.

COURSE CHAIRS:

G-B. Cadière
G. Dapri

May 28-29

September 24-25

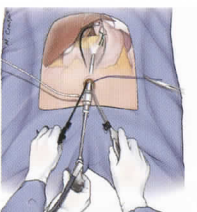

SINGLE INCISION SURGERY

COURSE DESCRIPTION:

With the era of the new philosophy of laparoscopic reduced port surgery, laparoscopy can appear less invasive if the number of the abdominal incisions is reduced. The umbilicus represents a well-healed natural scar allowing access to the peritoneal cavity through a single incision. The main advantage of the single-incision approach is the "scarless surgery" with an obvious cosmetic result, and other benefits. Hence the standard laparoscopic procedures can be performed with this technique.

COURSE OBJECTIVES:

- Show classical laparoscopic procedures usually reduced by 4, 5 trocars performed through a single-incision in the umbilicus or suprapubically.
- Review different instruments.
- Memorize the tricks of this approach.

COURSE CHAIR:

G. Dapri

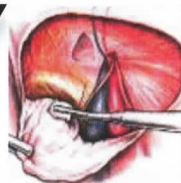

March 11

May 13

September 22

October 14

HERNIA REPAIR SURGERY

COURSE DESCRIPTION:

Participants will have the opportunity to view live TEP and TAPP procedures as well as incisional and primary abdominal wall hernia repair by laparoscopic approach.

Different techniques of laparoscopy, including reduced port and single incision will be showed.

COURSE OBJECTIVES:

- Review the relevant anatomy of the groin, viewed by the laparoscope.
- Show the two approaches in laparoscopic inguinal hernia repair, their indications and contraindications.
- Show how to cut back on costs.
- Show tricks and pitfalls in all of these procedures.

COURSE CHAIR:

G. Dapri

September 16
May 20

14TH NURSING DAY

COURSE DESCRIPTION:

Laparoscopy has tremendously increased the role of nursing staff around and during a surgical procedure. This one-day session helps participants decide how much of the nursing staff should be familiarized with these techniques, whether such surgery should be performed during the night (in case of emergency) and how to reorganize a nursing staff to support laparoscopic procedures. The course also covers the solution of technical problems relating to the laparoscopic tower and laparoscopic instruments. Participants explore all aspects of laparoscopy including materials used.

COURSE OBJECTIVES:

- Teach nursing staff to manage everything that is not in the operative field itself, so that the surgeon only has to deal with the internal cavity.

COURSE CHAIRS:

B. Cadière,
D. Lipski
K. Jottard,

December 3-4

TEACHING AT DISTANCE

E-LEARNING

The faculty can give recorded teaching, provide information to the data bank, and supply answers to questions from students by email. The faculty gives direct teaching in front of the camera while performing live procedures that are broadcasted to the attendees. The student has the opportunity to either check the pre-recorded teaching material at home or to attend the live teaching in the auditorium. When students perform their first procedure on their own, the surgeon-teacher can mentor by videoconference. This form of teaching allows the surgeon to follow the procedure on his screen and to give recommendations to the students accordingly.

TEACHING IN AFRICA

Our School organises one week teaching sessions in african countries, upon their request. The team provides laparoscopic equipment as well as videoconferencing tools. They demonstrate actual operative procedures, assist with training on a pelvic simulator and allow local surgeons to scrub in with their operations. Burundi, Congo, Rwanda, Cameroun, Sénégal, Mali, Burkina Faso, Gabon, Ivory Coast, Madagascar and Guinea have already benefited from this endeavour, which was made possible in a large part thanks to the help of the STORZ company.

Gabon: <http://www.youtube.com/watch?v=0W2Wg2D7CvU>

COLLABORATION WITH "WEBTELESURGERY PLATFORM"

"Webtelesurgery.com" is a online free platform for training, education, communication of surgery, specially laparoscopic surgery. It has been created by Prof Cavit AVCI in Istanbul and is managed by an "International Educational and Evaluation Board". Its main objective is the editing and dissemination of medico-surgical knowlege, in collaboration with major Scientific Associations and Centers of Excellence in Europe and other countries. The choice of transmission method is "a low-bandwidth Internet-based system" which assures the teletransmission in optimal quality of video to a very large number of regions with a lack of terrestrial communication infrastructure.

Our School and "Webtelesurgery Platform" have established a partnership to disseminate the courses or special teaching sessions organized by our team at distance.

COURSE CHAIR:

C. AVCI
(İstanbul, Turkey)

COOPERATION WITH MMESA

Our school and MMESA - Mediterranean and Middle East Endoscopic Surgery Association have entered into a partnership to deliver live teaching sessions at a distance. MMESA regroups 36 Countries around the Mediterranean sea and Middle East. It is an open association and other countries from Africa, the Black Sea region or Central Asia have also joined. MMESA is setting up a permanent IP videoconference satellite based infrastructure to disseminate and improve the practice of Laparoscopic surgery in these regions.

DIDACTIC MATERIAL

The Department of Gastrointestinal Surgery has created its educational, multi-media library for teaching purposes. The library consists of the following:

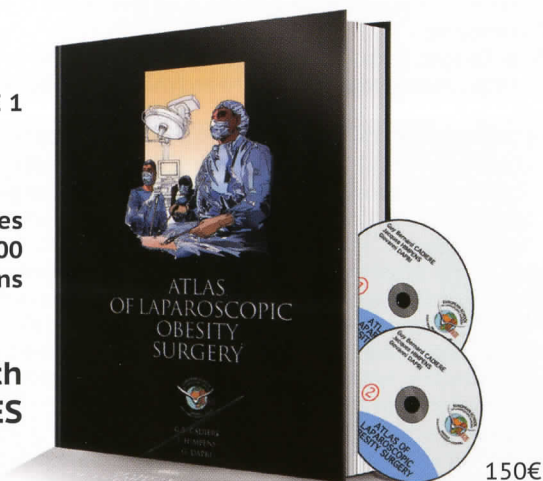

ATLAS OF LAPAROSCOPIC OBESITY SURGERY

G.B. CADIÈRE - J. HIMPENS - G. DAPRI

VOLUME 1

140 pages
with more than 200
original illustrations

2 DVDs with
39 MOVIES

IN PROCESSING:

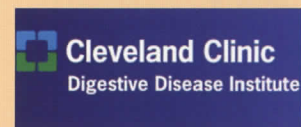

VOLUME 2: Atlas of laparoscopic revisional surgery for obesity
VOLUME 3: Atlas of laparoscopic surgery for cancer

Echos du «Nursing day» - 25 novembre 2011

Ecole Européenne de Chirurgie Laparoscopique - C.H.U. St. Pierre

Prof. G-B. Cadière *

Le service de chirurgie digestive du C.H.U. St. Pierre à Bruxelles gère depuis près de 20 ans une Ecole Européenne de Chirurgie Laparoscopique dont l'objectif consiste à prodiguer un enseignement post-universitaire de pointe en matière de chirurgie non-invasive. Ces nouvelles techniques opératoires imposent une réorganisation des ressources humaines du bloc. En effet, les chirurgiens utilisent des instruments sophistiqués manipulés au travers de trocars et doivent donc compter sur une assistance performante de la part des infirmier(e)s instrumentistes.

C'est pourquoi l'Ecole organise une fois par an une journée « Nursing Day » consacrée à la formation théorique et pratique des instrumentistes des salles d'opération.

La 11ème journée des instrumentistes s'est déroulée vendredi 25 novembre 2011 au site Cesar De Paepe du C.H.U. St. Pierre. Une centaine d'instrumentistes en provenance de toute la Belgique participaient à ce cours structuré sur deux demi-journées, l'une théorique et l'autre pratique.

Les participants francophones et néerlandophones réunis à l'auditoire pour le mot d'accueil se sont ensuite séparés. Les francophones répartis en cinq groupes (de 10 en moyenne) ont visité les stands des fournisseurs d'équipements. Ils ont pu manipuler eux-mêmes, sous le contrôle des délégués, les instruments spécifiquement dédiés à la chirurgie laparoscopique. Après le lunch, les francophones sont retournés à l'auditoire pour la partie théorique de leur formation. Ils ont pu assister en live à des interventions laparoscopiques de manière interactive. Les explications ont été assurées par l'instrumentiste du bloc opératoire, qui a répondu également aux questions posées par les participants.

A l'issue de la journée, tous les participants se sont retrouvés à l'auditoire pour la remise des diplômes et certificats de participation, ainsi que d'un prix récompensant les deux groupes qui s'étaient montrés les plus adroits dans les manipulations.
